A-PDF Watermark is an application that you can use to easily add watermarks to your PDF documents. It can be handled by individuals of any experience level. The interface of the program is clean and pretty intuitive. PDF documents can be imported into the list by using the file browser or treeview (the "drag and drop" method is not supported). Batch processing is allowed. In the queue you can check out the name, source path and password of each PDF document. So, all you have to do is select one of the template watermarks and apply changes to the files. But you can also create a new watermark (text, dynamic date time, image, PDF or shape), modify an existing watermark, move items up and down in the list, import and export watermarks, send content via FTP, as well as change the viewing mode, and others. In the "Settings" area you can enable A-PDF Watermark to automatically run at system startup, configure FTP settings, set the page range and enable the tool to backup files on added watermarks, and more. The simple-to-use program requires a moderate amount of system resources, includes a complete help file with snapshots for all user levels and didn't freeze, crash or pop up errors during our tests. On the other hand, its response time is not very good. But, even so, we strongly recommend A-PDF Watermark to all users.
